## 3 · Whitelists

Real-world-asset (RWA) issuers gate who may hold a permissioned token via an on-chain allowlist. An approved investor is typically whitelisted once per tokenized security — often many in a single batch — so these are eligibility credentials, not enforcement, and do not change the sanctions or blacklist result.

No whitelist or allowlist records found.

## 4 · Bridge interactions

On-chain bridge interactions. They are shown as facts and do not change the direct sanctions or blacklist result.

## 6 · Known Names

Names registered or observed for this address, shown as source-backed facts.

No known names found.

## 7 · Chain coverage

Some wallet addresses can be used on more than one related network. For each supported network checked, this table shows the most recent block number and UTC time our system read for this report, then whether any official sanctions, stablecoin blacklist, or freeze record was found.

No direct official sanctions match was found. This report is complete for its intended scope: direct official sanctions screening of the TRON address.

## 8 · Report integrity

This is the **live report** — it reflects the latest available Eagle Virtual data each time it loads. A **certified copy** is a permanent, point-in-time PDF: one serial, one timestamp, one signed snapshot, and a QR/verification URL anyone can re-check online. Create a new certified copy any time; older copies stay valid and downloadable.
